

CARDIOVASCULAR DISEASE RESEARCH STUDY

*Living with Diabetes, Hypertension and
Cardiovascular Disease?
You could be eligible for this research study.*

Despite recent advances in the management of health conditions, there remains an unmet need for effective therapies for patients who are Type 2 Diabetics, Hypertensive and who are living with Cardiovascular Disease.

With so many people in the UK affected by these conditions, research into new and evolving therapies is particularly important.

This study is investigating the effectiveness of the study treatment in reducing the risk of heart failure or a cardiovascular event. The study will last for up to 4.5 years.

To be eligible, you must be Type 2 Diabetic, have Hypertension and be living with Cardiovascular Disease.

*Other eligibility criteria will apply for this study
which our research team will discuss with you*

Why take part?

- **Access**

You may have access to a potential treatment hoping to reduce the risk of cardiovascular events. You will also have access to our experienced research team who will guide you through the trial and be there for your every step of the way.

- **Contribute**

By taking part in clinical research, you will be contributing to important medical research and may help others in the future.

- **Reimbursement**

All participants will receive reimbursement for their study related time and activities, such as visits to our clinic.
